

Abstract

The objective of this research were to find out the suitable model for file storage, to keep the information technology in Dhonburi Rajabhat University in the file, to develop the needed management information system for developing the living library. In doing the research, it was found that a large amount of information of Dhonburi Rajabhat University was saved under the electronics files and then stored them in the computer hard disk. The application files used was Microsoft Word which classified by job function.

The result of the research revealed that the users' satisfaction towards the management information system program developed by the Office of the Academic Resource and Information Technology was at a high level. The information stored by the program was correct, variable, safe, easy and fast to access. The information of each university section was separated and linked together. This process led to the establishment of living library, the database development system and the management information system including the distribution of the information which considered to be the body of knowledge to all network of Dhonburi Rajabhat University
